Cuyama Valley Clean Air Rooms Program

October 2, 2026

“I have lung issues, and I am very, very afraid when smoke comes into Cuyama. It fills up my house with smoke and I can’t breathe. This is going to make a huge difference to me, and I’m so, so grateful.” - Karen

“The air quality is really dusty. I was like, I have to get one! I’m excited — I’ll be able to breathe. - Tim

“My mom has emphysema and COPD, and this is going to be a game-changer for her. It’s going to be so helpful. It’s going to be very good for her health, especially during fire season.” -Missy

“We so appreciate APCD’s outstanding work to provide air purifiers for Cuyama Valley residents. In this low-income community, purchasing an air purifier to create a clean room is not an option for many, including our school district. APCD recognized the need — especially with our history of wildfire — and made this happen. We are proud to have been able to partner with APCD on this amazing event.”

Mission accomplished, congratulations [Carbon Mapper!](#)

When California vowed to launch our own damn satellite to track dangerous pollution, our partners stepped up to the challenge, launching the Tanager-1 satellite in 2024.

The project has already helped us stop 18 major methane leaks and the newly launched Tanager-2 will help us find and fix even more - using the data to tackle the most potent climate pollutant. CARB's commitment to science means we can use these expanded capabilities to supercharge our work and cut emissions faster.
