

EXTERNAL COMBUSTION EQUIPMENT SUMMARY FORM-33 Page 1 of 4

| (This form must be submitted for each | equipment item) |
|--|---|
| GENERAL | |
| 1. MANUFACTURER | MODEL NO |
| 2. SERIAL NO | OPERATOR ID |
| 3. EQUIPMENT USED AS A CONTROL DEVICE? [] YES [] NO | DATE OF INSTALLATION |
| 4. EQUIPMENT TYPE (Check one) [] Steam Boiler [] Afterburner [] Steam Generator [] Dryer [] Hot Water Boiler [] Oven [] Heater Treater [] Furnace [] Process Heater [] Kiln [] Incinerator [] Other (Descond) Class Type Waste | Material Dried, Baked, or Heated |
| 5. GENERAL INFORMATION REQUIRED: The following general informatio Site and plot plan, with dimensions, showing the location of the constraint of the description of the business. Description of the general purpose of the combustion unit and its and the source Review information. Submit information required by Offsets or Health Risk Assessment is required. | ombustion unit. associated production and/or process line. |
| 6. SIC NUMBER Submit manufacturer's literature, catalog, or equivalent information | n for the combustion unit. |
| EQUIPMENT RATING | |
| 7. MAXIMUM HEAT INPUT MMB | Btu/hr (report all Btu values in x.xxx format) |
| MAXIMUM ANNUAL HEAT INPUT^(a) MMB (a) This value represents the maximum requested annual heat input to limit on your permit. (Note: 1 Therm = 100,000 Btu) | Btu/year to your equipment and will be listed as a not-to-exceed |
| 9. BURNER MANUFACTURER | NO. OF BURNERS |
| MODEL NO. | INPUT: Maximum MMBtu/hr |
| Company Name | Facility Name |
| Person Completing This Form (please print) | Date |

APCD-33 (01/22/2020) Rev.04

EMISSION CALCULATIONS

17. EMISSION FACTOR^(a) (Contact APCD with any questions - If left blank, default APCD emission factors will be used)

| POLLUTANT | FUEL #1 | | | FUEL #2 | | |
|--|---------|-----------|---------------------------|---------|----------------------|---------------|
| | FACTOR | UNITS (b) | BASIS CODE ^(c) | FACTOR | UNITS ^(b) | BASIS CODE(c) |
| NOx (as NO ₂) | | lb/MMBtu | | | lb/MMBtu | |
| ROC | | lb/MMBtu | | | lb/MMBtu | |
| со | | lb/MMBtu | | | lb/MMBtu | |
| SO _x ^(d) (as SO ₂) | | lb/MMBtu | | | lb/MMBtu | |
| РМ | | lb/MMBtu | | | lb/MMBtu | |
| PM ₁₀ | | lb/MMBtu | | | lb/MMBtu | |

NOTES:

(a) Emission factors are used to establish allowable emissions on your permit.

- (b) Units "lb/MMBtu" based on the higher heating value. Incinerator applications must state the units used (e.g., lb/ton).(c) Basis Codes:
 - 1 Site specific source tests, CEMS or PEMS data (attach copy)
 - 2 Specifications by manufacturer (attach copy)
 - 3 Material balance (*attach copy of calculations*)
 - 4 Taken from AP-42 (Compilation of Air Pollution Emission Factors, EPA, 5th Edition, Chapter 1)
 - 5 Taken from Literature other than AP-42 (attach copy)
- (d) SO₂ emission factors are based mass balance calculations:
 - for liquid Fuels: SO_x EF (lb SO_x/MMBtu) = [20,000] [wt % S] [density, lb/gal] / [HHV, Btu/gal]
 - for gases: SO_x EF [lb SO_x/MMBtu] = [0.169] [ppmv S] / [HHV, Btu/scf]
 - Ex: Low sulfur diesel #2 (0.05% S by wt) EF = 0.0504 lb SO_x/MMBtu
 - Ex: PUC Quality Natural Gas (85 ppmvd S) EF = 0.0137 lb SO_x/MMBtu
- 18. EMISSIONS (Contact APCD with any questions)

| POLLUTANT | FUEL #1 | | FUEL #2 | |
|---------------------------------------|---------|----------|---------|----------|
| | LB/DAY | TON/YEAR | LB/DAY | TON/YEAR |
| NO _x (as NO ₂) | | | | |
| ROC | | | | |
| со | | | | |
| SO _x (as SO ₂) | | | | |
| РМ | | | | |
| PM ₁₀ | | | | |

NOTES:

- (a) Emissions are calculated based on the emission factor used. For daily emissions, multiply the max firing rate times the emission factor and then times 24 (hr/day). For annual emissions, multiply the max annual heat input times the emission factor and then divide by 2000 (lb/ton).
- (b) Report all emissions to two (2) decimal places (x.xx)
