Notes:

1. Where cost data ranges were provided, the higher value was used, otherwise the costs provided were used.
2. Each District operates and implements their offset programs slightly differently. See each District's rules for specifics of their programs.
3. "n/a" entries under \$/ton columns indicate that limited ERC cost data exists due to rarity of ERC trades (e.g., no trades in 15 years)
4. ERCs in District Banks may have specific limitations (e.g., non-federal projects only, etc.)
5. Other Banks may include Priority Reserves, Internal Banks, Essential Public Service Banks, Small Facility Banks and "District" Banks.
6. For those that indicated Yes to allowing MSERCs (Mobile Source ERCs), they noted that very few if any projects actually occurred.
7. For those that indicated Yes to allowing the issuance of MSERCs (Mobile Source ERCs), they noted that very few if any projects actually occurred.
8. Some Districts implement MSERCs by specific rules or do not allow the use of MSERCs to offset stationary sources.
9. For SBCAPCD, 99 tons of NOx and 10 tons VOC are restricted to DoD use only.
