C. Definitions

For purposes of this Rule and of Rules 1302 through 1305, the definitions listed below shall apply:

[...]

"Part 70 Source" means stationary sources included in the following source categories:

1. A stationary source with the potential to emit a regulated air pollutant or a hazardous air pollutant (HAP) in quantities equal to or exceeding any of the following thresholds:
   a. 100 tons per year of any regulated air pollutant except greenhouse gases.
   b. greenhouse gases that are “subject to regulation” as defined in 40 CFR 70.2 in effect July 1, 2010.
   b.c. 10 tons per year of any individual HAP or 25 tons per year of a combination of HAPs, or any lesser quantity thresholds for any HAPs established by USEPA rulemaking. Fugitive emissions of HAPs must be counted for the purposes of determining applicability. However, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units are Part 70 sources.
   e.d. Any lesser quantity thresholds established by USEPA rulemaking.

2. Any stationary source defined by the USEPA as major for the District under Title I, Part D (Plans for Nonattainment Areas) of the Clean Air Act and its implementing regulations including:
   a. For ozone nonattainment areas, sources with the potential to emit 100 tons per year or more of volatile organic compounds or oxides of nitrogen in areas classified as "marginal" or "moderate", 50 tons per year or more in areas classified as "serious", 25 tons per year or more in areas classified as "severe", and 10 tons per year or more in areas classified as "extreme".

3. Acid rain sources included under the provisions of Title IV of the Clean Air Act and its implementing regulations.

4. Any source required to have a preconstruction review permit pursuant to the requirements of the New Source Review (NSR) or Prevention of Significant Deterioration (PSD) program under Title I, Parts C and D of the Clean Air Act and its implementing regulations.

5. Any solid waste incineration unit required to obtain a Part 70 permit pursuant to Section 129(e) of the Clean Air Act and its implementing regulations.
6. Any stationary source in a source category required to obtain a Part 70 permit pursuant to regulations promulgated by the USEPA Environmental Protection Agency Administrator.

[...]

"Regulated Air Pollutant" means any air pollutant (a) which is emitted into and otherwise enters the ambient air, as defined in 40 CFR 50.1 in effect July 1, 2010, and (b) for which the USEPA Environmental Protection Agency has adopted an emission limit, standard or other requirement. Regulated air pollutants include:

1. Oxides of nitrogen (NO\textsubscript{x}), also, and volatile organic compounds (VOC) as defined in 40 CFR 51.166 in effect July 1, 2010;

2. Any pollutant for which a national ambient air quality standard has been promulgated pursuant to Section 109 of the CAA Clean Air Act and its implementing regulations;

3. Any pollutant subject to any standard promulgated under Section 111 (New Source Performance Standards) of the CAA Clean Air Act and its implementing regulations;

4. Any ozone-depleting substance specified as class I or II substance pursuant to Title VI of the CAA Clean Air Act and its implementing regulations;

5. Any pollutant subject to a standard promulgated under Section 112 (Hazardous Air Pollutants) of the CAA Clean Air Act and its implementing regulations, including:
   a. Any pollutant listed pursuant to Section 112(r) of the CAA Clean Air Act and its implementing regulations shall be considered a regulated air pollutant upon promulgation of the list.
   b. Any HAP hazardous air pollutant subject to a standard or other requirement promulgated by the USEPA Environmental Protection Agency pursuant to Section 112(d) of the CAA Clean Air Act or adopted by the District pursuant to Sections 112(g) and 112(j) of the CAA Clean Air Act shall be considered a regulated air pollutant for all sources or source categories: (a) upon promulgation of the standard or requirement, or (b) 18 months after the standard or requirement was scheduled to be promulgated pursuant to Section 112(e)(3) of the CAA Clean Air Act.
   c. Any HAP hazardous air pollutant subject to a District case-by-case emissions limitation determination for a new or modified source, prior to USEPA Environmental Protection Agency promulgation or scheduled promulgation of an emissions limitation, shall be considered a regulated air pollutant when the determination is made pursuant to Section 112(g)(2) of the CAA Clean Air Act and its implementing regulations. In case-by-case emissions limitation determinations, the HAP hazardous air pollutant shall be considered a regulated air pollutant only for the individual source for which the emission limitation determination was made.

6. Greenhouse gases that are “subject to regulation” as defined in 40 CFR 70.2 in effect July 1, 2010.
